# ROBERT SKONIECZNY

robbieskonieczny@gmail.com | linkedin.com/in/robert-skonieczny

## SOFTWARE ENGINEER

## SKILLS

**Languages:** C++, Python, Hack, Java, TypeScript, SQL
**Frameworks & Tools:** Spring Boot, NestJS, Node.js, Redis, GraphQL, Azure, AWS, Datadog

## PROFESSIONAL EXPERIENCE

**Meta (Virtual Usage Infrastructure)** New York, NY
*Software Engineer - Infrastructure* **Feb 2025 - Present**
*(Technologies: C++, Python, Hack, Thrift, Presto/SQL, Real-time Stream Processing, Data-intensive Batch Pipelines)*

- Architected and built a real-time stream processing capacity insights platform **handling 2.5 GB/s of usage data across $5.5B of Meta's infrastructure**, enabling real-time observability and serving as the foundation for capacity forecasting, planning, and fulfillment.
- Drove the technical roadmap for Meta's real-time usage platform, influencing multiple engineering teams and expanding adoption across infrastructure.
- Maintains and enhances client libraries in C++, Python, and Hack for resource usage ingestion and attribution, with the Hack library **invoked approximately 2.6 billion times fleet wide.**
- Established a platform-to-platform usage billing strategy through more granular resource attribution, providing deeper insight into resource dependencies and identifying **approximately $250M in potential annual operating cost savings.**
- Maintained and enhanced a Python-based distributed trace processing platform consuming **~60 billion service traces daily.**
- Led the "Lineage Analysis" initiative, using sampled distributed tracing to trace resource usage and attribution across services and help cross-functional teams understand cost attribution across infrastructure.

**AmeriSave (Financial Lending Institution)** New York, NY
*Software Engineer - Infrastructure* **April 2022 - Oct 2023 | May 2024 - Jan 2025**
*(Technologies: Java, SpringBoot, TypeScript, Nest.JS, SQL, Redis, GraphQL, Datadog, Azure)*

- Defined the roadmap and led the implementation of a post-fund auditing system, which **replaced a vendor's service, resulting in a cost reduction of $1M annually.**
- Designed a "Credit Precheck Engine" to determine a borrower's loan eligibility before processing.
- Led integrations with Fannie Mae's HomeReady product, **contributing to $44M of funded loans.**
- Identified improvements for developer productivity and spearheaded migration from Fastify to Nest.JS, and created in-house packages for authentication, caching, logging, and health status.
- Created a fee-matching service, which **increased the productivity of fee specialist underwriters by 10%.**
- Modernized parts of a large legacy ColdFusion monolithic service to a microservice architecture written in TypeScript.

**Vital Check Wellness (Corporate Medical Wellness)** New York, NY
*Software Engineer - Full Stack* **August 2020 - April 2022**
*(Technologies: Java, JSP, MongoDB, HTML, CSS, JQuery)*

- Architected, developed, and maintained a COVID-19 Vaccination/Test Attestation, **generating 200,000+ telemedicine encounters/check-ins.**
- Built a COVID-19 Vaccination/Test validation system that **processed over 300,000 submissions.**
- Created an orthopedic clinical encounter infrastructure that **serviced over 1,000 patients.**
- Led development of medical products for large stakeholders such as BlackRock, Gucci, Balenciaga, and Fordham University.

## EDUCATION

**City University of New York (CUNY) - College of Staten Island** New York, NY
*Bachelor of Science in Computer Science*
